

the specialist that looks after your cold chain — and keeps your **cofepris** log ready, 24/7.

AstrealoT watches your vaccine refrigerators, your freezer and your storeroom —every 5 minutes—, **alerts you before you lose the medicine** and builds the continuous record COFEPRIS requires. Three things you protect without hiring anyone else: your **money**, your **control** and your **compliance**.

WE DON'T JUST MEASURE A specialist reads the **real product temperature** (glycol-buffered probe, WHO standard) —not just the air— and alerts you **before** the medicine enters the risk zone. Over WhatsApp.

THREE THINGS IT LOOKS AFTER FOR YOU

● MONEY

you don't lose the most expensive inventory

An overnight compressor failure or a power cut can destroy **the entire vaccine refrigerator** —the pharmacy's most valuable inventory—. We catch it in time, not the next morning.

a single refrigerator you don't lose already paid for the service.

● CONTROL

you know what to attend to first

All your branches on one panel: which refrigerator is failing, which door was left open, which storeroom is warming. Plus a **panic button** for controlled substances and staff. You decide ahead of time.

from reacting to the disaster, to getting ahead of it.

● COMPLIANCE

you rest easy at the sanitary inspection

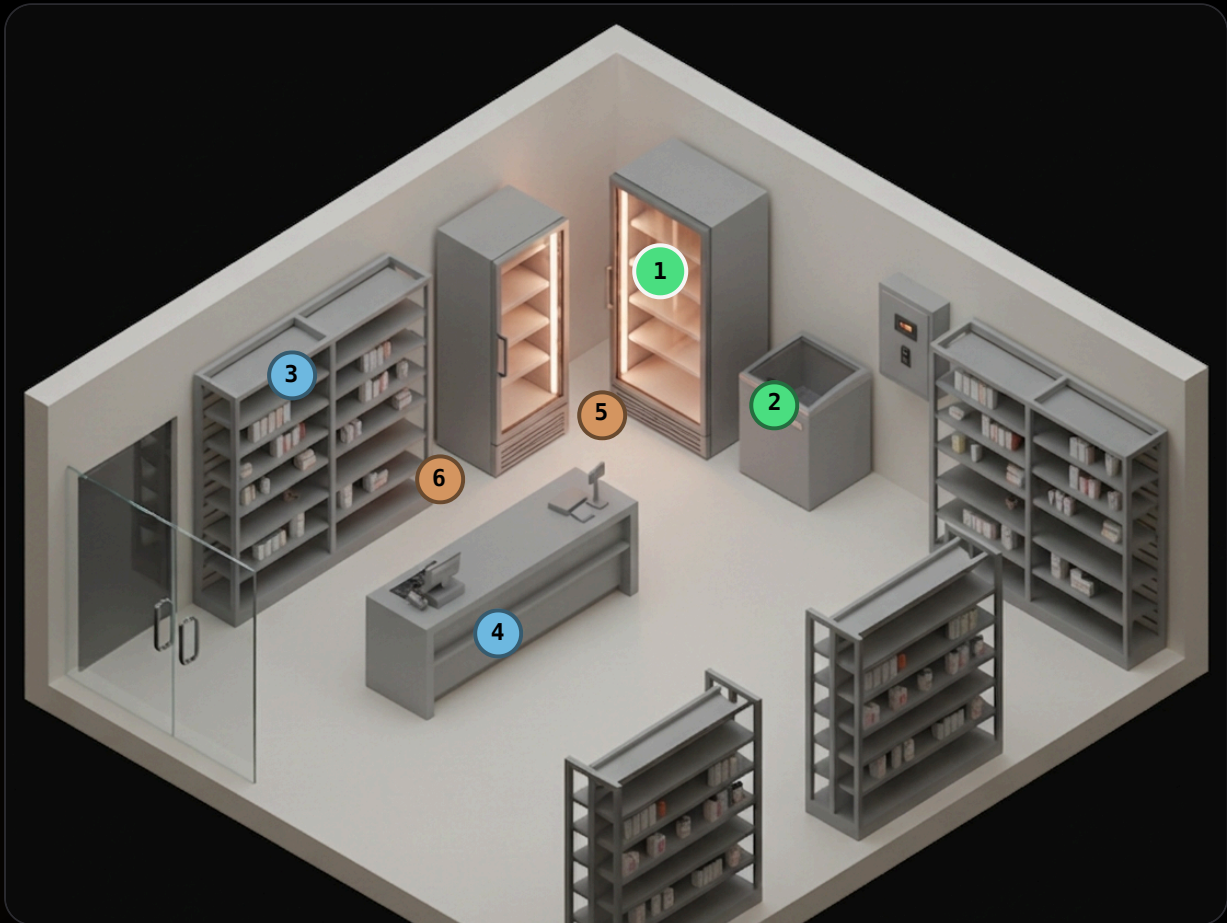

Continuous temperature logging per unit, no gaps. The log **COFEPRIS** requires (NOM-072), ready — without filling it in by hand.

we don't certify: we hand you the proof, with your name on it.

this is how we look after your pharmacy, **from the inside.**

Each number is a point where a wireless sensor works for you — and the specialist tells you what to do. **You install only the ones that apply to your branch.** The color says what each one protects:

● **money** — you stop losing ● **control** — you know what to do ● **compliance** — the proof ready

- 1 vaccine refrigerator ★**
we alert you to the failure before you lose the vaccines — the glycol-buffered probe measures the product, not the air
- 2 medicine freezer (-20°C)**
we alert you if it fails, before insulin and biologics thaw
- 3 general storeroom**
we alert you if temperature or humidity drift out of NOM-072
- 4 counter environment**
we alert you to conditions that damage medicine on display
- 5 water leak**
we alert you to a leak under refrigerators and equipment
- 6 panic button**
it raises the alarm instantly in a robbery or emergency

★ **the specialist reads the product, not just the air.** In the **vaccine refrigerator (1)** it crosses compressor current with temperature, and the **glycol-buffered probe** gives the medicine's real temperature (WHO standard) — alerting you **before** the risk zone. It all feeds your **COFEPRIS / NOM-072 log**, ready for inspection.

THE RETURN

a single vaccine refrigerator you don't lose **usually pays for the year.**

\$30K–\$120K of inventory

what the contents of a vaccine refrigerator are worth — **vaccines, insulin, biologics**

for every \$1 you invest

you protect **several pesos** in medicine, energy and replacements avoided

- **MONEY** cold protected — vaccines, insulin and biologics that aren't discarded
- **CONTROL** fewer overnight scares; security for controlled substances and staff
- **COMPLIANCE** no COFEPRIS findings — continuous evidence, ready when they ask

WHY IT WORKS

Air temperature deceives: a product can stay cold even as the air rises —or the reverse—. The **glycol-buffered probe** measures what really matters, the product, as the WHO recommends. It's not an optimistic threshold: it's the medicine.

WHY ASTREAIOT

We tell you what to do, not just data.

Clear priority and a specialist's read — not a dashboard you have to decode.

It measures the product, not just the air.

Glycol-buffered probe, WHO standard — the medicine's real temperature.

WhatsApp alerts.

No new apps — the alert reaches the pharmacist's phone.

It keeps watching even when the power goes out.

The gateway has a battery; the outage is exactly when it matters most.

ready to **never lose** a refrigerator again?

Start with **one branch**: a no-commitment pilot — you see the numbers in your own pharmacy before scaling to the whole chain.

Book your pilot or request a quote — no commitment.
